

Amendments to the Specification:

Please replace the paragraph beginning at page 12, line 21 with the following rewritten paragraph:

[62] The user input is also provided to a video strip generation component 436. The video strip generation component 436 generates instructions for displaying a navigation video strip. The navigation video strip includes several frames taken from the video 110. Typically, the frames in the navigation video strip are taken from the portion of the video 110 that was most recently displayed. The instructions generated by the video strip generation component 436 are provided to a video strip display component 438, which displays the navigation video strip on the display device 106. Various approaches for generating and displaying a navigation video strip are disclosed in co-pending U.S. Patent Application entitled "Systems and Methods for Enhanced Display and Navigation of Streaming Video," United States Patent Application No. 10/675,028, which is assigned to the assignee of the present invention and which is hereby incorporated by reference in its entirety.
